Education

University of California, San Diego — San Diego, CA
Bachelor of Science in Computer Science, Minor in Mathematics | GPA: 3.70 — *Expected June 2027*

- Relevant Coursework: Machine Learning: Learning Algorithms, Operating Systems, Machine Learning for Music, Artificial Intelligence: Search and Reasoning, Design and Analysis of Algorithms, Advanced Data Structures.

San Diego Miramar College — San Diego, CA
Associate of Science in Computer Science, Mathematics, and Physics, Highest Honors | GPA: 4.00 — *June 2025*

Experience

Software Engineering Intern — September 2026 – Present
Innovation for National Security (i4NS) — *San Diego, CA*

- Developing a neural network surrogate model to approximate computationally expensive radar propagation simulations, aiming to enable near-real-time U.S. Navy radar performance predictions under changing atmospheric and oceanographic conditions
- Collaborating with Navy stakeholders and technical experts to identify operational requirements, evaluate training data sources, and establish model accuracy and deployment constraints

Software Engineering Intern — June 2026 – September 2026
Brandes Investment Partners — *La Jolla, CA*

- Modernized a production SQL execution and code review platform using C#, .NET 10, Blazor, and SQL, supporting engineering workflows for submitting, reviewing, and executing database requests
- Developed REST API endpoints for SQL execution requests and application data, with authentication and authorization using certificates, identity tokens, and role-based access controls
- Automated request workflows and notifications across submission, approval, execution, failure, and escalation paths, reducing manual intervention for engineering and database teams

Software Engineering Intern — June 2025 – September 2025
Xometrics — *San Diego, CA*

- Built Python-based computer vision pipelines using SAM2, OpenCV, and FFmpeg to automate segmentation, background removal, compositing, and video enhancement workflows
- Designed batch-processing pipelines that automated multi-hour media processing jobs and reduced manual intervention
- Improved runtime efficiency and segmentation stability through profiling, debugging, and mask refinement, achieving a 91% background segmentation success rate across challenging frames

STEM Tutor — February 2024 – Present
San Diego Community College District — *San Diego, CA*

- Tutored students in computer science, mathematics, and physics through one-on-one instruction, group sessions, and embedded classroom support
- Guided students through algorithms, data structures, programming, debugging, and quantitative problem solving while adapting explanations to different skill levels

Leadership

President — August 2024 – June 2025
Miramar Engineering Club — *San Diego, CA*

- Led a multidisciplinary engineering team as President, coordinating design, development, and competition preparation for the MATE ROV competition
- Earned 2nd place among 14 teams while contributing to C++ control software, sensor integration, and live video streaming for the team's underwater ROV

Technical Skills

Languages: Python, Java, C++, C, C#, SQL, JavaScript, MATLAB
Frameworks / Technologies: TensorFlow, REST APIs, OpenCV, SAM2, FFmpeg, .NET 10, Blazor, HTML, CSS
Developer Tools: Linux, Git/GitHub, GDB, SSH, GitHub Copilot, VS Code
Concepts: Computer Vision, Performance Optimization, Data Structures, Algorithms, Debugging, Unit Testing
